

Color – Our Passion for Over 30 Years!

Throughout the years we came across many projects that required special attention. Not all concrete is created equal (nor is brick for that matter). And for this exact reason we manufacture different types of stain. Nawkaw's product lines range from acrylic stains to mineral silicate stains and are well suited for particular surfaces and applications. Nawkaw's innovations in staining technologies and finishing techniques have turned the page on the aesthetics of concrete.

Our Certified Stain Applicators will consult with you and provide creative solutions for any project of any size.

Nawkaw Services

- Restoration
- Corrective Application

- New Construction (On-Site, In-Situ, Precast, Tilt-Up)
- Color Matching/Blending
- Recoloring
- Creative Application
- Adaptive Reuse
- Commercial Projects
- Government Projects
- Institutional Projects
- Highway Projects

Architectural Finishes

The photos below, featuring our "Aged Copper"-Finish, illustrate how color helps to define the shape and depth of the building's structure. Without the color, the building appears very flat and one-dimensional. The color improves the overall look of the building dramatically by accentuating the concrete's dimensions and depth. The possibilities are endless! Interested in more information about architectural finishes or color for concrete and masonry Nawkaw has to offer? Call us today or visit www.nawkaw.com!

Nawkaw®
We change the color of masonry and concrete!

380 Commerce Blvd. • Athens, GA 30606 • www.nawkaw.com • 1-866-4-NAWKAW

NAWKAW

The solution for creating captivating buildings.

Our products and services add value and a spectacular look to your precast or tilt-up buildings.

Commercial Services

Beautiful, natural looking color for brick, block, concrete, mortar, stucco and stone.

Nawkaw®
We change the color of masonry and concrete!

Nawkaw works with the world's leading architects, designers and contractors to transform properties into attractive, eye-catching buildings through the power of color and innovative staining technologies.

We manufacture a product line of specialty stains that have been optimized for different surfaces and needs over the past 3 decades.

At Nawkaw we have pioneered techniques that allow us to execute and control the staining process to guarantee a natural, appealing and consistent appearance.

Color makes the difference...

When it comes to first impressions your building's color is what catches the eye first. Our experienced and well-trained Certified Stain Applicators are professionals that are able to achieve just any color and create any look you have in mind. Components can be stained at a precast facility, on a tilt-up job-site, or while our Certified Stain Applicators are being suspended from a swing stage fifty stories up in the air. Their performance and results are always superb!

Color for National Brands

Nawkaw helps national brands establish and maintain color consistency. We store colors in a digital library so they can be quickly retrieved for use at any location across the country and around the world.

Paint vs. Stain

◀ Notice how the stain dramatically enhances the highlights, mid-tones, and shadows created by the wood textured concrete. The semi-translucent color allows the texture to show through rather than being covered up. NawTone® stains are uniquely formulated for masonry and concrete. Unlike paint, which rests on top of the surface, our products penetrate and bond to masonry and concrete, forming an incredibly durable finish that won't chip, blister, or peel.

▼ When paint traps moisture beneath the surface, it can lead to unsightly peeling and require multiple reapplications. This is what we call "Paintenance". NawTone® stains are a one-and-done finish. Our stains are custom blended, allowing for infinite color control on every project.
